PROJECTS

NGO CHARITABLES

HTML, CSS, and JAVASCRIPT

- The platform aims to support poverty, child education by connecting donors, volunteers, and educational NGOs.
- The website archive's the goal of "Sustainable development" (Project at IBM SkillsBuild).

Telegram Bot

Python

Developed a Telegram bot using Python to automate tasks such as sending notification, responding to user queries.

Image-Based Text Encryption Using Steganography

Python

- Built a secure text-hiding tool using the Least Significant Bit (LSB) technique in Python.

- It embeds encrypted messages within image pixels without altering visual quality, making it useful for information security and network forensics applications.

Employee Record Management System

PHP and MySQL

Created an employee record management system using PHP & MySQL, enabling efficient tracking and management of employee data like employee education, employee experience.

Calories Burned Prediction

Machine Learning

In this Prediction, I applied different regression techniques to predict the data of calories burned in the exercises from the knowledge of duration, heart rate, body temperature, age, weight, height and gender.
